A fine, aged patina and character wrinkles are a sign of the extremely high-quality materials used to construct your saddlebags. The appearance of scars or marks on the leather are a result of using natural leather panels and should not be thought of as an imperfection. SPORTSTER® FOOT CONTROLS
A long stretch to the controls or a knees-high cramped riding position puts strain on your body after even a short ride. Repositioning your feet on the controls relieves muscle tension, takes pressure off the tailbone, and reduces rider fatigue. Where your feet contact the controls can often determine how many miles you can put on in a day.

Many Sportster® models can be equipped with the following foot control configurations:

STANDARD FORWARD CONTROLS:
Places the legs for a "feet-in the-wind" laid-back profiling posture.

FURTHER FORWARD MID CONTROLS:
Achieves a comfortable foot-down riding position for the taller rider.

D. STANDARD FORWARD CONTROL KIT*
Add the stretched-out look and extended riding position to your Sportster model. The complete kit includes all hardware necessary to convert your Sportster model from mid controls to forward controls. Available in your choice of finishes, these forward controls add style and long range comfort. (Footpegs and shifter peg not included.)

The forward location provides an open path for your feet to aid maneuvering the bike while parking and improves access to the jiffy stand for a shorter rider. Kit includes control mounts, brake and shift levers, brake rod, mini-footboards with wear pegs and all hardware necessary to convert your mid or forward control-equipped Sportster model.

Keep an eye on your Sportster® model fuel level without watching how many miles you have traveled. In-tank sending unit employs capacitive sensing technology to accurately monitor the fuel level and relays the information to a handlebar-mounted LED indicator for at-a-glance viewing. The segmented LED display is set into a distinctive housing that replaces the brake master cylinder cover on the right hand control. The individual LED segments glow when the tank is full and count down one by one as the fuel level drops. Kit includes sending unit, LED master cylinder cover, wiring harness and all necessary installation hardware.

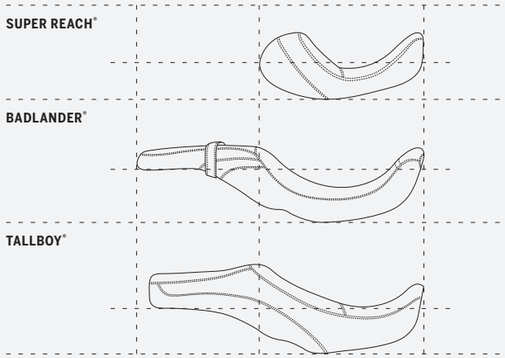
ENJOY THE RIDE

The relationship between the seat, the handlebar and the foot controls has an enormous impact on the comfort, control and confidence you feel when riding your motorcycle. Once you've picked the bike, it's time to choose the options that match your ride to your personal dimensions.

For shorter riders, consider tailoring your fit by changing to a Reach® Seat, Mid Foot Controls and lowered suspension height.

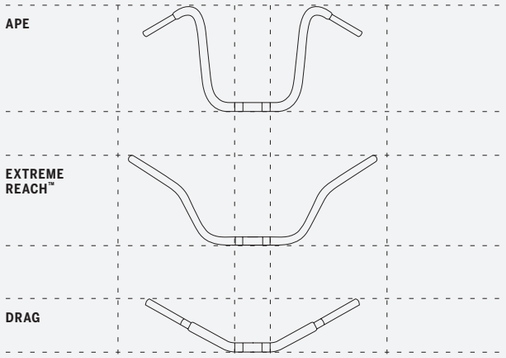
For taller riders, consider altering your ride by changing to a Tallboy® Seat and Extended Foot Controls.

ESTABLISH YOUR POSITION AND FEEL



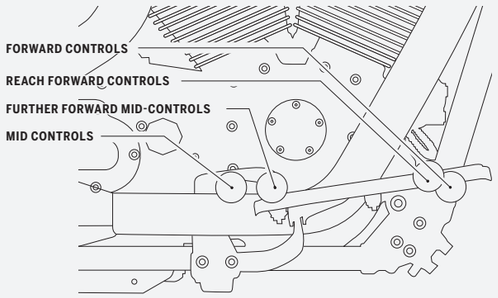
SEATS

Seat height and shape impact rider comfort, fit and confidence. Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.



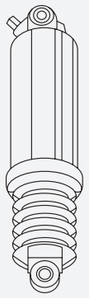
HANDLEBARS

Where the bar positions your arms, hands and wrists directly impacts how you feel on the motorcycle. Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.



FOOT CONTROLS

Repositioning your feet can relieve muscle tension, take pressure off the tailbone and reduce fatigue. The correct riding position can add hours of comfort and hundreds of miles to your daily saddle time.



SUSPENSION

Adjusting your motorcycle's ride height by raising or lowering the suspension is often the first step in fitting the bike to your stature. Being sure-footed at a stop can really increase your sense of confidence.

The combination positions the rider closer to the hand and foot controls to offer both comfort and confidence. REACH TWO-UP SEATS
Designed to position riders with a shorter inseam closer to the ground, Reach Two-Up Seats are shaped to place the rider in a comfortable and confident relationship to the hand and foot controls. The wide seating surface provides loads of support and the narrow tapered nose brings the rider's legs together for an easier reach to the ground at a stop. These Reach Two-Up Seats feature a stepped profile that keeps the rider from sliding rearward during acceleration, and a generous raised passenger position that cradles the tailbone for hours of riding comfort. The rich vinyl seating surface is accented with a classic Harley-Davidson® medallion.

Tallboy Seats feature a bucket-shaped design and a wide seating surface to reduce pressure on the rider's tailbone, without looking bulky or overstuffed. And the passenger pillion is shaped and padded to maximize passenger comfort. The rich vinyl seating surface is accented with a round Harley-Davidson medallion.

The appearance of scars or marks on the leather are a result of using natural leather panels and should not be thought of as an imperfection. A. WIND SPLITTER VENTED WINDSHIELD
Reduce helmet buffeting at speed. The Harley-Davidson® Detachables™ Wind Splitter Vented Windshield features an exclusive fingertip-adjustable center vent that reduces turbulence behind the windscreen. When open, the controlled airflow fills the negative pressure area behind the shield and helps to smooth the flow of air over the top of the screen and around the rider. The revised flow reduces helmet bobbing and neck fatigue so you can comfortably spend more time in the saddle. The open vent also provides cooling airflow to the rider at low speeds and in city traffic.

Engineered to provide the riding comfort of a larger windshield, this low-profile screen's contemporary contour sets it apart from the crowd. The shape keeps the windshield below your sight line so you don't look through bugs and road grime and the detachable design means you can ride without the shield when the mood strikes. The shield is formed of hard-coated polycarbonate for strength and scratch resistance and the dark-smoked finish reduces glare. The slim polished stainless steel brackets mount to the Original Equipment rubber isolated docking points for ease of installation and removal.

A. COOLFLOW™ FAN

Unlike traditional fan kits that try to cool the engine by blowing air across the cylinders and often onto your legs, the CoolFlow™ Fan Kit keeps the riders comfortable by pulling air away from the rear cylinder and exhaust pipe, and directing it toward the ground.

The CoolFlow Fan features switched On/Off/Auto operation on '17-later models and On/Off on '09-'16 models. In the "ON" mode, the fan is active at low speeds, and will turn off when the bike reaches 40mph. As speed drops, the fan turns back on at 35 mph. This logic program prevents the fan from cycling on and off during low speed changes. On '17-later models, the AUTO setting operates based on a combination of speed parameters and specific engine and ambient temperatures. Built to withstand the harsh motorcycle environment, the all-weather CoolFlow Fan is 100% waterproof and includes everything you need for installation. The plug-and-play design is integrated with the vehicle electronics, so "On/Off/Auto" fan operation is indicated in the odometer screen. Your dealer will enable this function in the Electronic Control Module (ECM) and you're ready to roll. Odometer fan status display feature availability varies by model and may not be available for your vehicle.

COMFORT IS KING

The ability to spend hours behind the handlebars and rack up hundreds of miles without stopping is dictated by how you feel on your bike. The shape of the seat, the reach to the handlebars and the location of your feet are all major factors in how far you can travel in a day. But don't forget your passenger's needs — he or she has a stake in this ride as well.

THE RIDER & PASSENGER ENVIRONMENT

Accessories that impact the rider and passenger's physical contact with the motorcycle and the management of wind, temperature and road conditions should be your first consideration in building the ultimate touring machine.

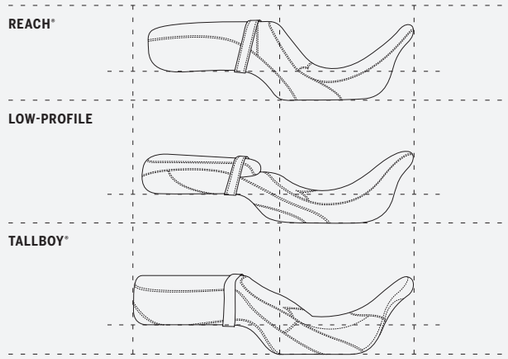
ENJOY THE RIDE

The relationship between the seat, the handlebar and the foot controls has an enormous impact on the comfort, control and confidence you feel when riding your motorcycle. Once you've picked the bike, it's time to choose the options that match your ride to your personal dimensions.

For shorter riders, consider tailoring your fit by changing to a Reach® Seat, Standard Foot Controls and lowered suspension height.

For taller riders, consider altering your ride by changing to a Tallboy® Seat and Extended Foot Controls.

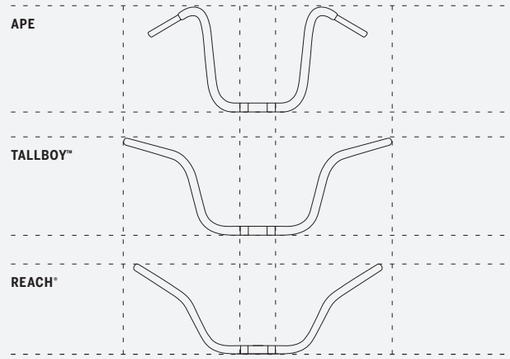
ESTABLISH YOUR POSITION AND FEEL



SEATS

Seat height and shape impact rider comfort, fit and confidence. Where the seat positions you relative to the foot controls, hand controls and the ground plays a major role in the quality of your ride.

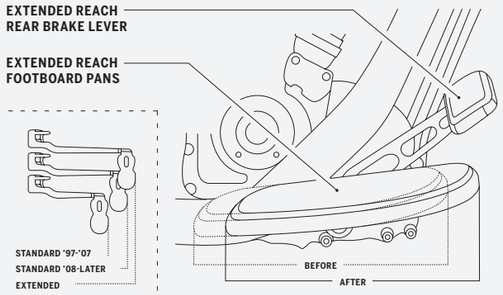
SEE PAGES 150-164



HANDLEBARS

Where the bar positions your arms, hands and wrists directly impacts how you feel on the motorcycle. Choose a bar that falls easily to hand, and does not pull you out of the seat when maneuvering.

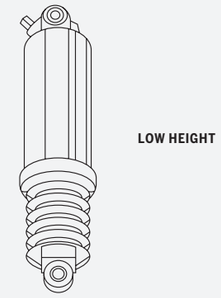
SEE PAGES 420-441



FOOT CONTROLS

Repositioning your feet can relieve muscle tension, take pressure off the tailbone and reduce fatigue. The correct riding position can add hours of comfort and hundreds of miles to your daily saddle time.

SEE PAGES 192-199



SUSPENSION

Adjusting your motorcycle's ride height by raising or lowering the suspension is often the first step in fitting the bike to your stature. Being sure-footed at a stop can really increase your sense of confidence.

REACH® SEATS
Designed to position riders with a shorter inseam closer to the ground, Reach® Seats are shaped to place the rider in a comfortable and confident relationship to the hand and foot controls. The wide seating surface provides loads of support while riding and the narrow tapered nose brings your legs together for an easier reach to the ground at a stop. Reach Seats feature a stepped profile that provides back support and keeps the rider from sliding back during acceleration.

A. SUPER REACH SEAT
Get a little bit closer. Super Reach forward position seats are designed to move riders with a shorter inseam even closer to the controls and to bring the legs about 1.0" closer together so that your feet rest firmly on the pavement. The scooped bucket-shape saddle is enhanced with added back support padding to move the rider lower and forward.* The combination positions the rider closer to the hand and foot controls to offer both comfort and confidence. Seat can be equipped with optional rider backrest for added support and comfort.

*Measurements based on Original Equipment Electra Glide® seat:
'09 models – 2.0" lower, 2.5" forward

B. REACH SOLO SEAT
From the custom metal Bar & Shield medallion to the sleek fast-back design, this seat is shaped to deliver the ergonomic position that a shorter rider needs. Sculpted and molded to ease the reach to the ground, this Reach Solo seat places the rider 3/8" lower and 1-1/4" forward when compared to the stock FLHX seat*. The narrow nose and the low overall height provides the rider with added confidence and control while the bike is at a stop or during parking maneuvers, while the generous seating width adds support for the long haul. And the seat's upturned tail moves you closer to the controls without confining you to one position. For maximum comfort and support, this seat is recommended for smaller-framed riders between 5'-2" and 5'-8" tall.

ROAD ZEPPELIN® AIR ADJUSTABLE SEATS
The open road. That's where we developed and tested the revolutionary comfort of the Road Zeppelin® Seat. This remarkable seat removes pressure points and hot spots by adjusting the amount of air contained in each bladder within the seat. Easy-to-reach rocker switches on the side of the seat control the built-in compressor, adding and bleeding off air with the quick push of a button to help relieve stress from the lower back, tailbone or lower extremities. On a long run, occasionally inflating and deflating the air bladders reduces the "numb butt" effect by improving the blood flow to the extremities. So grab a seat. And enjoy the ride.

A. ROAD ZEPPELIN AIR ADJUSTABLE SEAT

The Road Zeppelin seat's ergonomically friendly design combines a narrow front nose for ease of touching the ground at a stop with a wide seating surface for long-range rider and passenger comfort. The easy-to-clean vinyl seat is finished with an embroidered Road Zeppelin logo that lets everyone see that you take riding comfort seriously. The slotted seat accepts an optional rider backrest or passenger grab rail for additional touring comfort.

B. HARLEY® HAMMOCK TOURING SEATS

Stay in the saddle all day. These Harley® Hammock Seats feature broad seating surfaces and a shallow bucket shape to distribute the weight and reduce pressure points. Beneath the 2" of traditional dual-density foam, the rider's weight is supported by a revolutionary fabric suspension system. The sling-like suspension system is integrated into the seat and acts like a hammock, providing 2" of suspension above the seat pan. This internal system prevents bottoming out and provides a 30% improvement in comfort and endurance over the long haul by sheltering the rider from pothole and highway expansion joint impacts. The generous seat length permits freedom of movement on long rides, making this seat a perfect option for taller riders.

PREMIUM ADJUSTABLE PERFORMANCE SUSPENSION

Step up to the ultimate in handling and ride quality. Screamin' Eagle®/Öhlins® Remote Reservoir Rear Shocks for Harley-Davidson® Touring models were designed for Screamin' Eagle® Factory Team race bikes and it's what the Wymans had on their Road Glide® Special motorcycles. Fully adjustable for preload and compression/rebound damping, with a remote reservoir for optimal performance and style. Use these shocks to dial in your ideal combination of handling and ride, for the street or the track. Ride like a winner.

1 COMPRESSION ADJUSTER

Fine-tunes suspension to control the upward wheel movement when hitting a bump

Adjusts the speed at which the suspension compresses

Critical for balancing ride quality and suspension bottoming

2 REBOUND ADJUSTER

Fine-tunes the downward wheel movement after riding over bumps or potholes

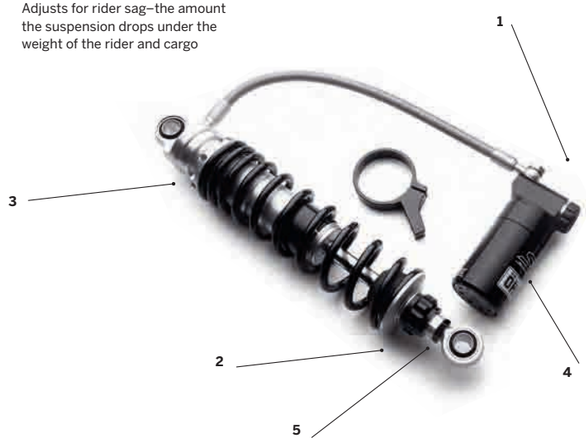
Adjusts the speed at which the suspension returns from extension

Critical for balancing ride quality and suspension bounce

3 PRELOAD ADJUSTER

Critical to setting the proper suspension travel to soak up large potholes and absorb large bumps

Adjusts for rider sag–the amount the suspension drops under the weight of the rider and cargo



4 REMOTE RESERVOIR

Remote reservoir keeps the shock oil cooler to maintain damping performance

Internal bladder separates the oil from the nitrogen gas to reduce cavitation during aggressive riding

5 LENGTH

The shock length is adjustable from +8mm or -2mm over the standard height.

- Prevents the motorcycle from rolling when it is stopped, for example at a stop sign on a hill, in stop-and-go traffic on a slope, or on a steep decline out of a parking structure
- The system applies brake pressure from the time the rider has released the brake controls until the rider actuates the throttle and clutch to pull away

TRANSPARENT PAINT GUARD KITS
This transparent skin is designed to protect your paint from bugs, boot scuffs and road debris. The crystal-clear material protects the paint without changing the overall look of your bike. And the optical properties of the material disguise minor scuffs and scratches. The application process is similar to that of tinted window film and the material can be removed and replaced when it is no longer cosmetically appealing. Scratches to paint can be expensive to repair but scratches to this film can be removed by applying a small amount of heat with a heat gun.

C. SCREAMIN' EAGLE® SMART TUNE PRO AUTOMATIC TUNING MODULE*

Smart Tune PRO works with the Screamin' Eagle Pro Street Tuner to automatically adjust your bike for the combination of performance components, climates and vehicle load conditions you are operating in. You just install the upgraded wideband oxygen sensors in the exhaust headers, download the calibration that the Screamin' Eagle engineers have developed as a starting point, then simply drive down the road and let Smart Tune PRO do the work.

Smart Tune PRO constantly monitors the operating parameters of your motorcycle, and automatically adjusts the bike's Electronic Control Module (ECM) to maximize performance in your current riding conditions. Smart Tune PRO utilizes wideband O_2 sensors that read oxygen levels in the exhaust stream to determine the optimum air/fuel ratio your bike needs at this very moment. Smart Tune PRO analyzes the data and automatically makes real-time tuning adjustments to the ECM. Unlike the standard narrow-band O_2 sensors that only provide feedback in the part-throttle cruising range, the wideband sensors can read and adjust tuning throughout the part throttle cruising and full-throttle acceleration operating range.

It is fully factory supported, and optimized to maximize performance while maintaining drivability and engine longevity. Smart Tune PRO is 50-State EPA compliant and does not impact the H-D™ factory warranty. Kit includes the Smart Tune PRO module with plug-in wiring harness, two M18 wideband O_2 sensors and access to free software updates, future calibrations and free online training modules. Screamin' Eagle Pro Street Tuner and model-specific installation hardware is sold separately.

41000445A

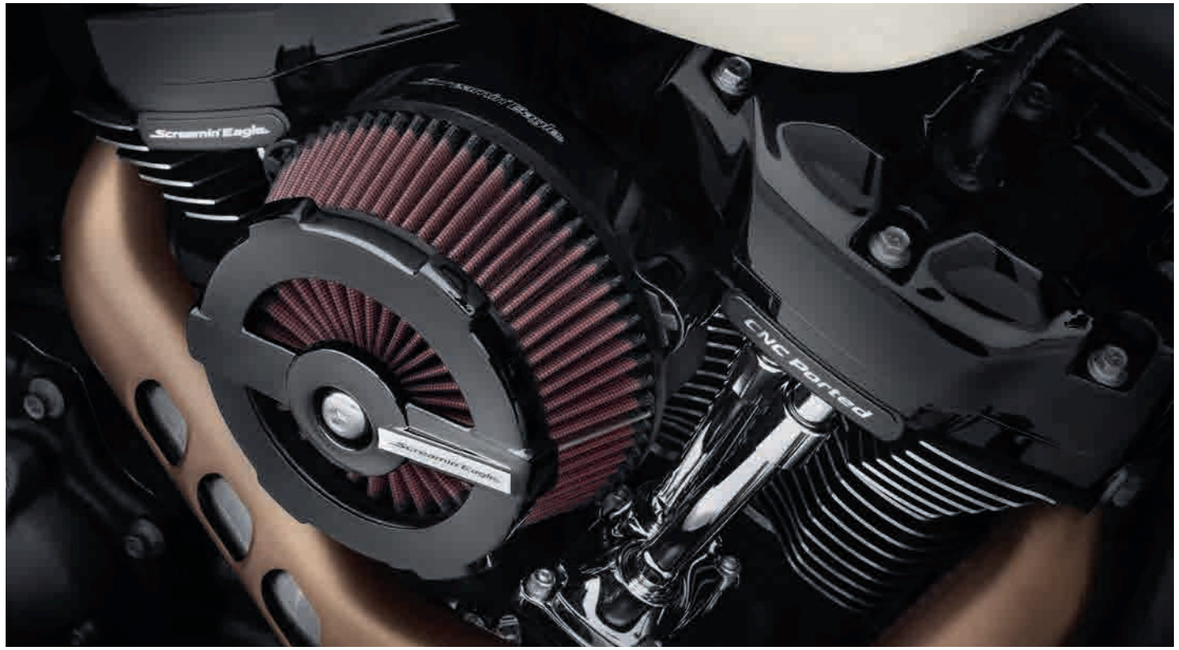
MILWAUKEE-EIGHT® POWERTRAIN

Screamin' Eagle Stage upgrades offer complete street-compliant performance configurations engineered to generate specific torque and horsepower gains. Eliminating all the guesswork and trial-and-error testing normally associated with engine modifications, Stage upgrades include everything you need to enhance your bike's performance. Start with the foundation, the Stage I upgrade, then choose from Stage II, III or IV depending on your performance goals, budget and riding style.



STAGE I

INTAKE + EXHAUST + TUNING

The easiest and most cost effective step to improve your motorcycle's performance is to increase the airflow into and out of the engine. A high-flow air cleaner and system-matched slip-on mufflers provide horsepower and torque improvements you can feel throughout the RPM range, and serve as the core components for all performance upgrades. ECM calibration is required to tune the fuel flow and timing required to accommodate the improved airflow.

Stage I upgrade can be installed without engine disassembly. No special tools are required. Requires ECM tuning.

Street legal and/or street compliant statements refer to product meeting 50-State emissions and noise standards in the United States. The street legal and/or street compliant statements may not apply to markets outside of the United States.

STAGE II

STAGE I + CAM UPGRADE

Adding performance cams to a Stage I equipped bike is the next step to improved performance. Cam choices allow you to tailor the engine's performance to your specific needs. A torque cam offers on-demand throttle response from low- to mid-RPM at cruising speed. A power cam targets high-RPM, wide-open throttle response that keeps pulling right up to the redline. ECM calibration tuning is required to accommodate the increased valve timing, and performance valve springs may be required for high-lift cams.

Stage II upgrade requires minor engine disassembly to replace the cam. Adjustable pushrods allow cam installation without removing the rocker box. Special tools and ECM tuning are required.

STAGE III

STAGE I + CAM, BIG BORE CYLINDERS & PISTONS

The next step on the performance journey is to build a bigger engine. An increase in engine displacement allows the engine to swallow more air and fuel, a higher compression piston squeezes the air/fuel into a more volatile mixture, and when combined, generates more power when ignited. A displacement and compression increase provides torque increases throughout the entire RPM range with a 15-25% improvement in the mid-range power. ECM calibration tuning is required to adjust fuel flow and timing to accommodate the increased displacement.

Stage III bolt-on upgrade requires removal of the engine's top end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

STAGE IV

STAGE I + CAM, BIG BORE CYLINDERS, PISTONS, CYLINDER HEADS & THROTTLE BODY

To maximize the impact of the increased displacement gained with Stage III updates, the addition of free-flowing ported cylinder heads and a big bore throttle body top off the performance build. Designed to satisfy the high-RPM, throttle-twisting rider, the Stage IV update delivers 20-30% increase in power that keeps pulling right up to the redline, without sacrificing mid-range torque. ECM calibration tuning is required to add more fuel, and a higher-lift cam may be required to deliver maximum power.

Stage IV bolt-on upgrade requires removal of the engine's top-end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

Heavy Breather

A. SCREAMIN' EAGLE® HEAVY BREATHER EXTREME AIR CLEANER

Designed for maximum performance, this race inspired Screamin' Eagle Heavy Breather Extreme Air Cleaner flows 20% more air than the Original Equipment air box. At speeds over 60 mph, the air cleaner experiences a ram-air effect. The all-new filter design captures air from the Extreme face, on the front of the air cleaner. The air then travels through the race inspired elbow followed by a straight shot into the throttle body. Designed to feed a large-displacement engine enough clean air that can support output of over 150hp. This air cleaner provides a stout increase in torque throughout the mid-range, as compared to other air cleaner designs. Water-resistant K&N oiled-cotton filter is washable and rechargeable using K&N Air Filter Care Service Kit P/N 99850-92T). Standard rain sock keeps water, dust and debris from contacting your air filter. Extra insurance when riding in the elements. 49-State U.S. EPA compliant.

Fits '23-later Center Cooled Touring models, '25-later Softail models (except FXLRST) and '26-later Trike models. Does not fit models with lower fairings. Does not fit California models.

A. SCREAMIN' EAGLE® HEAVY BREATHER EXTREME AIR CLEANER

We've taken the iconic Screamin' Eagle Heavy Breather Air Cleaner to the next level–an extreme performance level. Designed for maximum performance, this extra-large Screamin' Eagle Heavy Breather Extreme Air Filter flows 42% more air than a traditional Heavy Breather filter. Air moves smoothly through the filter due to an interior bell-shape feature and then travels through a unique round to oval transitioned tube to improve leg clearance while providing unobstructed air to the throttle body. At speeds over 60 mph, the filter captures air from the front, forcing the air through a smaller area to create a RAM air effect, while the long intake tube enhances torque beyond other Ventilator and Round High-Flow Filters for enhanced acceleration. Designed to feed a large displacement engine enough clean air that can support output of over 150hp. The cast aluminum intake tube and back plate are dressed in rich, gloss black or mirror-like chrome. The back plate features a Screamin' Eagle logo. Kit includes all required mounting hardware. Optional Rain Sock P/N 29400424 is available to protect the exposed element in inclement weather.

B. SCREAMIN' EAGLE® HEAVY BREATHER ELITE AIR CLEANER – MILWAUKEE-EIGHT® ENGINE

Take a deep breath. This Screamin' Eagle Heavy Breather Elite picks up where the past generation Milwaukee-Eight Heavy Breather left off with a 15% air flow improvement. Redesigned to support even more performance with engine builds pushing over 135hp. The iconic Heavy Breather Air Cleaner features a forward-facing oiled cotton filter element that flows large volumes of clean air into the engine. The short, low profile cast tube rams the charge directly into the throttle body with little turbulence for increased power and torque, and the intake tube mounts to a custom back plate that features integral breathers and covers the throttle body electronics for a finished look. The slanted compact filter adds an aggressive performance look, and it is shaped to allow installation on Touring bikes equipped with fairing lowers. This Elite version includes an integrated cover manufactured from forged aluminum and precision machined to further enhance the stylized performance look while exposing a majority of the filter to maximize airflow. Available in your choice of chrome or gloss black finish, the kit includes filter, cover, intake tube, custom back plate, and all mounting hardware.

TWIN CAM POWERTRAIN

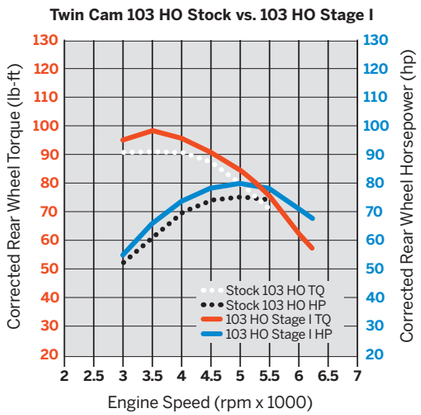
Screamin' Eagle® Stage upgrades offer complete street-compliant performance configurations engineered to generate specific torque and horsepower gains. Eliminating all the guesswork and trial-and-error testing normally associated with engine modifications, Stage upgrades include everything you need to enhance your bike's performance.

STAGE I

INTAKE + EXHAUST + TUNING

The easiest and most cost-effective step to improve your motorcycle's performance is to increase the airflow into and out of the engine. A high-flow air cleaner and system-matched slip-on muffles provide horsepower and torque improvements you can feel throughout the RPM range, and serve as the core components for all performance upgrades. ECM calibration is required to tune the fuel flow and timing required to accommodate the improved airflow.

Stage I upgrade can be installed without engine disassembly. No special tools are required. Requires ECM tuning.



STAGE II

STAGE I + CAM UPGRADE

Adding performance cams to a Stage I equipped bike is the next step to improved performance. Cam choices allow you to tailor the engine's performance to your specific needs. A torque cam offers on-demand throttle response from low to mid RPM at cruising speed. A power cam targets high-RPM, wide-open throttle response that keeps pulling right up to redline. ECM calibration tuning is required to accommodate the increased valve timing, and performance valve springs may be required for high-lift cams.

Stage II upgrade requires minor engine disassembly to replace the cam. Adjustable pushrods allow cam installation without removing the rocker box. Special tools and ECM tuning are required.

STAGE III

STAGE I + CAMS, BIG BORE CYLINDERS & PISTONS

The next step on the performance journey is to build a bigger engine. An increase in engine displacement allows the engine to swallow more air and fuel, a higher-compression piston squeezes the air/fuel into a more volatile mixture, and when combined, generates more power when ignited. A displacement and compression increase provides torque increases throughout the entire RPM range with a 15-25% improvement in the mid-range power. ECM calibration tuning is required to adjust fuel flow and timing to accommodate the increased displacement.

Stage III bolt-on upgrade requires removal of the engine's top end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

STAGE IV

STAGE I + CAMS, BIG BORE CYLINDERS, PISTONS, CYLINDER HEADS & THROTTLE BODY

To maximize the impact of the increased displacement gained with Stage III updates, the addition of free-flowing ported cylinder heads and a big bore throttle body top off the performance build. Designed to satisfy the high-RPM, throttle-twisting rider, the Stage IV update delivers 20-30% increase in power that keeps pulling right up to the redline, without sacrificing mid-range torque. ECM calibration tuning is required to add more fuel, and a higher-lift cam may be required to deliver maximum power.

Stage IV bolt-on upgrade requires removal of the engine's top end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

TWIN CAM STAGE II UPGRADE

Camshafts are a fundamental ingredient in the performance recipe, because they control the timing and duration of all major engine events. They are the primary means by which you can tune your engine's horsepower and torque output. Every cam has unique lift and overlap performance characteristics, which means you need to select cams based on exactly the kind of power you're looking for.

A. SCREAMIN EAGLE® TWIN CAM PERFORMANCE CAMS

Kits include front and rear cams. Splined rear cam is included for exceptional load handling capability. Gaskets and bearings not included. Cam Installation Kit P/N 17045-99C (sold separately) includes all required gaskets, bearings and seals for proper installation. Dealer installation is recommended and special tools are required for proper installation.

SE-255 CAM KIT

The ultimate in torque cams, this cam offers substantial increase in low end torque for engines up to 110 cubic inches with compression ratios up to 10 to 1. The low end torque increases are great for heavy bikes or for the person who routinely shifts below 4500 RPM and wants the power available to pass without downshifting. The cam still makes peak power above 5000 RPM so people with lighter bikes will enjoy the torque increases without feeling like the bike runs out of air at higher engine speeds. 50-State U.S. EPA compliant.

25638-07

For use on '09-'13 Dyna®, Softail®, and '09-'13 Touring and Trike models with 103CI and 110CI engines. All models require ECM calibration for proper installation. Labor cost not included. See Dealer for details.

SE-259E CAM KIT

Developed specifically for big displacement Twin Cam engines, this cam has a modern lobe design that allows for higher valve lifts for a given duration. A high-lift version of the SE-211 camshaft, this cam works great with 103-cubic-inch and larger engines with free-flowing intake and exhaust. It can be used with stock heads (updated with race springs) and high-compression pistons for even more torque than a SE-211 cam or can be coupled with any of the performance heads to realize the full power potential. 50-State U.S. EPA compliant.

25482-10

For use on '11-'15 103CI and 110CI Touring and Trike models. Installation requires separate purchase of Performance Valve Spring Kit P/N 18013-03A. All models require ECM calibration for proper installation. Labor cost not included. See Dealer for details.

SE-585 CAM KIT

This cam is a great match for riders of heavy Touring bikes looking for big torque at the low end. Just a quick downshift to fourth gear results in an effortless pass of that slow-moving tractor-trailer ahead of you. This cam provides an early hit of torque at the low end of the RPM spectrum. A unique combination of lift, cam lobe duration and an enhanced cam profile ramp provides a performance boost you can feel. The cam's QRD (Quiet Ramp Design) delivers high torque throughout the RPM range while reducing valve train noise. 50-State U.S. EPA compliant.

25400117

For use on '14-'16 Touring models with the use of a 58mm Throttle Body. Also fits '14-'16 CVO™ Touring models with or without the use of a 58mm Throttle Body. Does not fit Trike models. A. SCREAMIN' EAGLE® BILLET CAM SUPPORT PLATE WITH HIGH-VOLUME OIL PUMP

A great upgrade for any performance motor. The Billet Cam Support Plate is manufactured from billet aluminum with pressed-in bronze bushings and is pre-assembled with the crankshaft bushing and oil pressure relief valve. Aluminum is specified at 6061 billet plate, heat-treated to T6 specifications with a surface-hardened anodized finish to provide superior strength, rigidity and durability. CNC-precision machining ensures precise dimensions and constant material thickness across the plate, enabling perfect alignment of cams and chains. Cam bushings are made from 660 bronze materials to provide enhanced wear resistance and to stand up to increased loads from the high lift cams common in large displacement motors. The improved Screamin' Eagle high-flow oil pump provides higher pressure when the oil is hot to keep pressure drops to a minimum and increases the oil supply by 16% and the scavenging by 29% over the '06-'17 Original Equipment oil pump.

25282-11

Fits '06-'17 Dyna® and '07-'17 Softail®, and '07-'16 Touring and Trike models. Installation requires separate purchase of Cam Service Kit P/N 17045-99D and Drive Gear Retention Kit P/N 25566-06.

B. SCREAMIN' EAGLE HYDRAULIC CAM CHAIN TENSIONER AND HIGH-FLOW OIL PUMP UPGRADE KIT

This kit updates the cam chain tensioner of your Twin Cam 88® engine to the latest design, as featured on the Twin Cam 96™ engine. The billet cam support plate has been designed to allow the installation of the Twin Cam 96™ hydraulic cam chain tensioner to Twin Cam 88-equipped models. These Hydraulic Cam Chain Tensioners will significantly outlast the spring-loaded tensioners and are an ideal addition to an engine modified for improved performance. In addition, '02-'06 models utilize a Twin Cam 96 single row front roller chain and sprocket (included in kit). '99-'01 models use Original Equipment front silent chain and sprocket to retain the cam position sensor function. The kit includes an improved Screamin' Eagle High-Flow Oil Pump that provides increased oil pressure at high-operating temperatures. This kit increases the oil supply by 23% and scavenging by 50% when compared to the '99-'05 Original Equipment oil pump and reduces operating temperature of bearings to improve bearing life.

STAGE III & IV UPGRADES

Screamin' Eagle® Stage Kits offer complete street-compliant performance configurations engineered to help you generate specific torque and horsepower gains. Eliminating all the guesswork and trial-and-error testing normally associated with engine modifications, Stage Kits include everything you need to enhance your bike's performance, including big-bore cylinders, high-compression pistons, performance cams and high-flow air cleaners.

FEATURES

BOLT-ON BIG BORE CYLINDERS

In the past, the only way to increase the bore of your 103- or 110-cubic-inch Twin Cam V-Twin motor was to tear down the motor and re-bore the engine cases to fit larger bore cylinder spigots. It was a labor-intensive and expensive process. The Screamin' Eagle team has engineered a 4" Big Bore Cylinder and Piston package that increase the internal bore from 3-7/8" to 4", without increasing the outside diameter of the cylinder spigot. The cylinder slips into the existing case bore without modification.

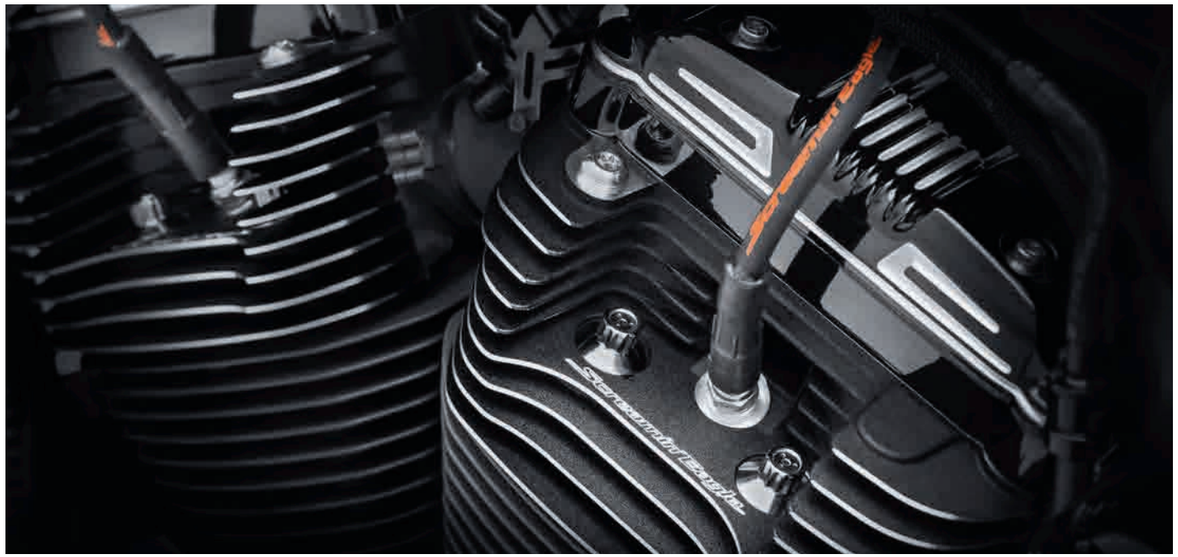
SPORTSTER® POWERTRAIN

Screamin' Eagle® Stage upgrades offer complete street-compliant performance configurations engineered to generate specific torque and horsepower gains. Eliminating all the guesswork and trial-and-error testing normally associated with engine modifications, Stage upgrades include everything you need to enhance your bike's performance.



STAGE I

INTAKE + EXHAUST + TUNING

The easiest and most cost-effective step to improve your motorcycle's performance is to increase the airflow into and out of the engine. A high-flow air cleaner and system-matched slip-on mufflers provide horsepower and torque improvements you can feel throughout the RPM range, and serve as the core components for all performance upgrades. ECM calibration is required to tune the fuel flow and timing required to accommodate the improved airflow.

Stage I upgrade can be installed without engine disassembly. No special tools are required. Requires ECM tuning.

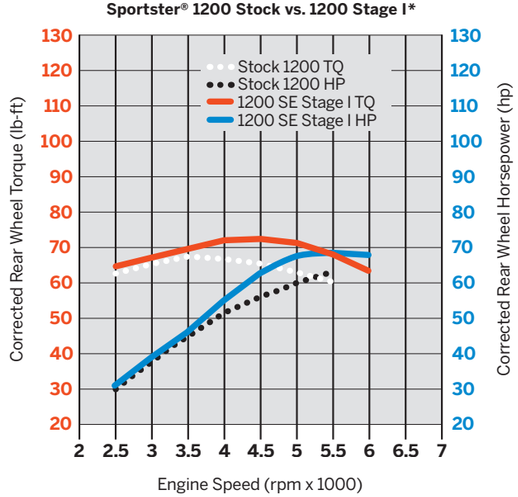
Sportster® 1200 Stock vs. 1200 Stage I*



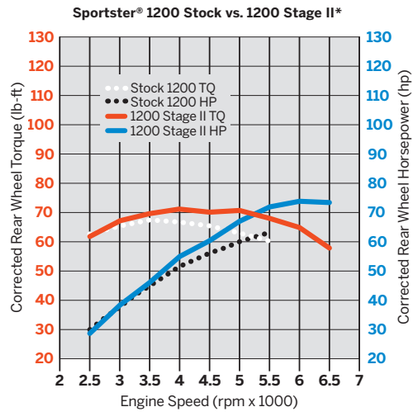
*14-'22 XL1200 Stage II with Heavy Breather A/C & Street Cannon Mufflers

STAGE II

STAGE I + CAM UPGRADE

Adding performance cams to a Stage I equipped bike is the next step to improved performance. Cam choices allow you to tailor the engine's performance to your specific needs. A torque cam offers on-demand throttle response from low to mid RPM at cruising speed. A power cam targets high-RPM, wide-open throttle response that keeps pulling right up to redline. ECM calibration tuning is required to accommodate the increased valve timing, and performance valve springs may be required for high-lift cams.

Sportster® 1200 Stock vs. 1200 Stage II*



*14-'22 XL1200 Stage II with Heavy Breather A/C & Street Cannon Mufflers

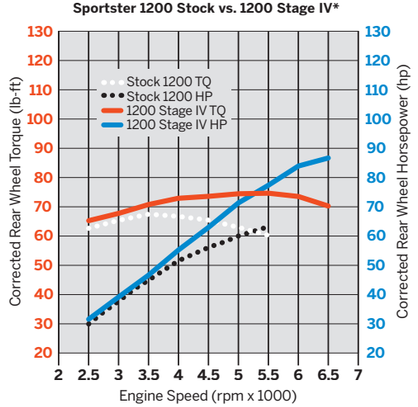
Stage II upgrade requires minor engine disassembly to replace the cam. Special tools and ECM tuning are required.

STAGE IV

STAGE I + CAMS, PISTONS, CYLINDER HEADS & THROTTLE BODY

For maximum performance improvement, the addition of high-compression pistons, free-flowing ported cylinder heads and a big bore throttle body top off a performance build. The large-diameter throttle body and port-matched intake manifold deliver huge volumes of fuel and air to the engine, the smooth passages and larger valves easily dump the mixture into the engine and the high compression pistons squeeze the air/fuel into a more volatile vapor. When ignited, the result is a major power increase. Designed to satisfy the high-RPM, throttle-twisting rider, the Stage IV update delivers 20-30% increase in power that keeps pulling right up to the redline, without sacrificing mid-range torque. ECM calibration tuning is required to add more fuel, and a higher-lift cam may be required to deliver maximum power.

Sportster 1200 Stock vs. 1200 Stage IV*



*1200 Stage IV with High-Flow A/C & Street Cannon Mufflers

Stage IV bolt-on upgrade requires removal of the engine's top end and opening the cam chest. Engine remains in the chassis and no machining is required. Special tools and ECM tuning are required.

E. SCREAMIN' EAGLE® BIG TWIN COMPENSATOR

This premium compensator has been engineered with heavier springs and increased travel to support the high torque output associated with high-compression race and large displacement engines. Designed to outperform the Original Equipment compensator, this unit helps protect the engine and driveline components during harsh drag race launches. Compensator features improved oil passages, oil deflectors and a needle bearing thrust washer that improves the overall operation of these components.

F. SCREAMIN' EAGLE VARIABLE PRESSURE CLUTCH

Get more performance from the Original Equipment clutch. The Screamin' Eagle Variable Pressure Clutch is designed to help put the added power from a Screamin' Eagle Stage Kit to the pavement. This bolt-on kit harnesses the centrifugal force of spinning weights to increase the clutch capacity as engine speed increases. The mechanism applies increasing pressure to the stock clutch pressure plate as RPM rises. The result: high torque-handling capabilities without increasing clutch lever effort at idle. The Variable Pressure Clutch also provides smoother clutch disengagement at lower speed. Kit fits behind most stock derby covers with no modifications. See installation manual for additional accessory derby cover fitment information.

To match the performance demands of your engine, team the Variable Pressure Clutch with your choice of clutch diaphragm springs. We recommend the higher-capacity Screamin' Eagle Diaphragm Spring P/N 37951-98 for major performance upgrades.

	Lever Effort	Torque Capacity
Original Equipment Spring	Same as stock	120 ft-lbs
SE Spring P/N 37951-98	35% greater than stock	153 ft-lbs

Clutch is designed to improve engagement grip and provides minor slippage during downshifting to reduce shock to the power train. Reduces hand lever pull effort by over 1 pound. Complete kit features improved clutch plates for enhanced wear resistance and is the perfect addition when installing a high-output Screamin' Eagle Stage Kit.

37000026
Fits '14-'16 Touring and Trike models with hydraulic clutch actuator. Original Equipment on FXDLS, FLSS, FLSTBS and FXSE models.

Kit includes Kevlar® fiber-based friction discs and performance clutch spring.

Fits '91-'22 XL and '94-'97 Evolution 1340-equipped models.

E. SCREAMIN' EAGLE PERFORMANCE SLIPPER CLUTCH FOR VRSC™ MODELS

This clutch offers reduced lever effort and improved performance. The unique "slip and assist" ramp system opens the two halves of the clutch hub slightly during high loads to the drivetrain, allowing a moderate slip that reduces shock to the drivetrain during rapid downshifting. The resulting reduction in wheel hop allows maximum contact between the tire and the road in wet or slippery conditions. Clutch lever effort is also reduced by 20% in 1130cc and 30% on 1250cc applications.

37938-08KA
Fits '02-'07 VRSC™ models.

HEATED HAND GRIPS
Keep comfortable on those cool mornings or frigid night rides. Warm hands have a major impact on overall body comfort and sometimes gloves just aren't enough. These thermostatically controlled grips feature variable heat settings controlled with a military-grade resistor and use automatic temperature monitoring to adjust to ambient temperatures. With both hands on the grips, they will remain at a constant temperature regardless of changes in outside temperature. The self-contained control circuit and control knob means you have no additional switches or controller boxes to mount and the grips are switched on/off with the ignition to avoid draining your battery. The glueless grip design allows grip removal if you change handlebars or motorcycles.

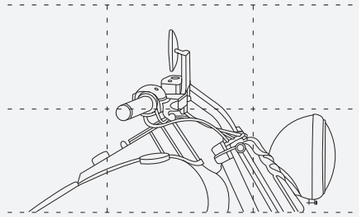
COMFORT, STYLE OR BOTH?

Every person is unique. Your overall height, arm reach, upper body length and riding style all dictate your relationship to the bike's controls. Add in the desire for a unique, custom look and your handlebar options multiply exponentially.*

REACH® HANDLEBARS
Recommended for shorter riders, Reach Handlebars are shaped to position the hand controls closer to the rider for optimized elbow and wrist position.

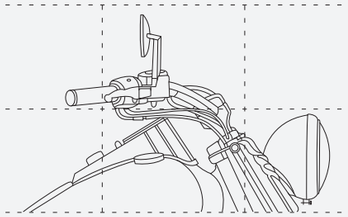
TALLBOY® HANDLEBARS
Recommended for taller riders, Tallboy handlebars enable long-armed riders to more comfortably fit and maneuver the motorcycle.

YOUR RIDING POSITION



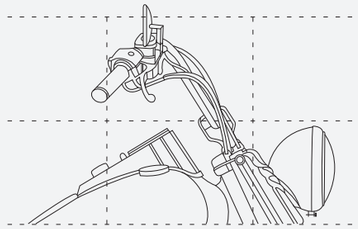
DRAG HANDLEBAR*

Narrow, flat and more aggressive, drag bars provide a straight elbow and neutral hand and wrist position. For maximum comfort, drag bars can be positioned with curved or straight risers to minimize stretch to the controls.



BEACH HANDLEBAR*

Low and wide, a beach bar spreads your arms and gives you room to breathe. Ideal for the rider with long arms, beach bars can be a little too wide for many riders. While selecting a bar, make sure you can reach the hand controls when the handlebar is fully turned.



APE & TALLBOY HANDLEBAR*

Tall and wide, ape and Tallboy handlebars provide a classic "fists-in-the-wind" look and can add long-haul comfort for riders with long arms. Because handlebar height is regulated in many areas, check local laws before installing a tall handlebar.

CHIZELED HANDLEBAR*

For cutting edge style, a Chizeled Bar combines the hands-up feel of a mini-ape with the narrow width of a drag bar. The bar's shoulder-width design keeps the elbows in and the arms straight ahead, and the wrist and hands fall in a neutral palms-down grip.

CHOOSING YOUR HANDLEBAR

RISE is the vertical distance between a handlebar's tip and its base. Adding risers to bars that sit too low can help put hand grips into your sweet spot.

PULL BACK is the distance the handlebar tips come back toward the rider. Greater pull back can eliminate the long reach to the bar for a shorter rider.

WIDTH is measured from tip to tip. Make sure the bar isn't too wide so it pulls your hands off the grips when turning.

KNURL CENTER is the distance between the center line of the bar's knurling. The measurement should match the riser dimension to maximize clamping pressure.

*NOTE: Installation of some handlebars and risers may require a change in clutch and/or throttle cable and brake lines for some models. Handlebar height is regulated in many locations. Check local laws to ensure your motorcycle meets applicable regulations.

CHOOSE YOUR BATWING HANDLEBAR
Just about every model of Harley-Davidson® motorcycle features a different stock handlebar. Selected to complement the style or use of the bike, the handlebar may be the ideal shape for many riders, but of course, not everyone has the same physical characteristics.

Choosing a bar for your batwing fairing-equipped model is about more than just style – it's about how you approach the road. Where the bar positions your hands, wrists and arms directly affects how you feel on your motorcycle. For every set of bars, there are three factors at work: rise, pull back and width. These three measurements determine your reach to the hand controls and, therefore, your overall feeling of comfort and control.

The Harley-Davidson® powered by Rockford Fosgate® App
Install and fine-tune the system yourself. Smart-Install makes initial installation and upgrades incredibly fast and easy. The Harley-Davidson powered by Rockford Fosgate® App even adapts for each new speaker added to the audio system and tailors the audio experience automatically.

HARLEY-DAVIDSON® AUDIO POWERED BY ROCKFORD FOSGATE® AMPLIFIER

Powerful, intelligent amplifier technology engineered to perform in the demanding motorcycle environment. This new, compact amplifier is easy to install in the motorcycle saddlebag. R-Tune: Equalization is specific to the motorcycle environment, designed from the ground up to be stronger and louder, to overcome road rumble and wind noise. Left and right speakers are designed to project sound directly at the rider for an enhanced audio experience. M-DEQ™ (Motorcycle Dynamic EQ): Our smart amplifier adaptively changes the EQ points in real time, meaning the tune changes to ensure incredible sound quality no matter the motorcycle speed or riding conditions. BME (Bass Management Enhancement): Designed to produce more bass, no matter the volume. The active amplifier DSP continually adapts to speed and road noise and maximizes the speakers' bass output to create powerful bass at any volume or speed. Computer Controlled Digital Signal Processing: Smart control, agile configurations. This intelligent amplifier continuously adapts to your speaker set-up. When you step up to the next audio stage or add additional speakers, the amplifier adjusts signal and output and is ready to deliver the sound quality and SPL you demand. Full Range Class-D Technology: More power and less electrical fatigue. These high-efficiency amplifiers produce class leading power and don't over-draw on the motorcycle electrical system. Ridiculously Rugged: Built stronger and ready to go anywhere. This amplifier was designed and tested over 80 hours to perform in the harshest conditions, no matter the heat or environment. So, anywhere you and your bike can go, our amplifiers can too. Rated Power: 50 watts per channel x 4 @ 4ohms; 100 watts per channel x 4 @ 2ohms Dimensions: 8.13" x 5.39" x 2.01"

B. BOOM! BOX 6.5GT RADIO KIT

The Boom! Box 6.5 GT Infotainment System is the ideal upgrade for Touring models equipped with the standard Boom! Box 4.3 radio. One look at the brilliant 6.5" display and you know that this is something special. Boom! Box 6.5GT features a low-distortion 25-watt/channel amplifier that has been optimized for great sound in an open-air environment. The result is cleaner, sharper sound at volumes up to 25% louder than previous Original Equipment radios. The feature-packed radio is factory-equipped with AM/FM radio, weather alert, integrated iPod® and USB audio device playback, map-based GPS navigation and Bluetooth® pairing of mobile phones. The 6.5GT features can be accessed via the glove-friendly touchscreen, joystick hand controls or with hands-free voice recognition. And it doesn't stop there. C. WIRELESS HEADSET INTERFACE MODULE

It's time to cut the cord with your bike. Now available for '14-later Touring and Trike models equipped with Boom!™ Audio 6.5GT and GTS Radios, this Wireless Headset Interface Module (WHIM) lets you communicate with your bike without being wired to it. The WHIM Bluetooth® adapter permits wireless connectivity to the 6.5GT infotainment system, allowing you to communicate via CB radio, hear turn-by-turn GPS directions, listen to your favorite radio stations and so much more all through your Bluetooth-enabled headset.

Bluetooth® Wireless Technology
Wireless interface permits full access to the Infotainment features without the hassle of being connected to the bike. You have full freedom of movement for turning your head and getting off the bike at fuel stops.

Integrated Into the 6.5GT and GTS Radio
Seamlessly use all wired headset functionality (CB, Phone, Intercom, Navigation, Radio) without the compromises of aftermarket systems, and configure your Boom! Audio 20S headset directly from the radio controls.

Superior Audio Quality
Harley-Davidson® headsets feature proprietary software that delivers superior audio quality with stereo output compared to non-Harley™ headsets, which provide a mono sound output.

Dual Headset Connectivity
Two Bluetooth-enabled headsets can be connected to one WHIM, simplifying installation and keeping costs in line.

Integrated Behind the Fairing
Module mounts behind the fairing and connects directly to the radio, eliminating external wires and connections to console and Tour-Pak® communication ports.

Compatible with H-D™ Wireless Headsets
Current H-D wireless headsets are completely compatible. No need to purchase new headsets to use the WHIM system. Harley headset volume can be adjusted from the motorcycle hand controls.

Impact of Retrofit on Wired Microphone Functionality
Upon installation of the WHIM, your motorcycle's wired microphone functionality will no longer be available. However, wired audio will continue to function as before.

The quick-disconnect plug allows you to step away from the motorcycle without removing the helmet and the coiled cord permits freedom of movement in the saddle. The 7-pin DIN plug can be connected to the front and rear communications ports, allowing both rider and passenger access to the music, navigation and voice communications features of your motorcycle and the microphone has been optimized for superior clarity when connected to Harley-Davidson intercom and Bike-to-Bike communications equipment.

A clothing clip (not shown) is included for added comfort and reduced ear fatigue. The coiled cord permits freedom of movement in the saddle. The 7-pin DIN plug can be connected to the front and rear communications ports, allowing both rider and passenger access to the music, navigation and voice communications features of the motorcycle.

LIGHTING

A. SPECTRA GLO™ LED LIGHTING CONTROLLER KIT*

Nothing draws attention at the curb like a well-lighted bike. Whether you are looking for a rich neon glow or a pulsing crowd pleaser, the Harley-Davidson® Spectra Glo™ Lighting System brings ultra-bright LED lighting to your ride. The Spectra Glo System utilizes RGB LED technology to produce over 500 shades of brilliant color, all controllable with a water-proof handheld wireless fob. Simply use one button to select one of the 7 base colors, and then dial in the shade you desire. You can choose to match the color of your bike, or add a contrasting tone from the wide spectrum of colors. Once you select a color, you can choose between solid, flash or fade modes with a tap of the remote control.

At the core of the Spectra Glo system is the Lighting Controller. The compact waterproof controller box is hidden beneath the seat, and is activated with the included wireless remote fob. The Lighting Controller is the hub for all the added Spectra Glo light options, and syncs the color and mode selection between all the LEDs. Designed specifically for Harley-Davidson® motorcycles, the controller will not interfere with the bike's electronics. Unlike some traditional fog lamps, the low-draw LED lamps do not burden the bike's electrical system. COLOR-MATCHED SLIPSTREAM VENT TRIM AND ROAD GLIDE® HEADLAMP TRIM COVERS

COLOR-MATCHED SPLITSTREAM VENT TRIM – BATWING FAIRING
The batwing fairing is a key visual and functional element of your Touring bike, and the Splitstream vent sits front and center for all to see. Shaped to replace the Original Equipment satin black soft trim, this one-piece rigid component blends into the sweep of the outer fairing and dresses the vent in style. Available in your choice of finishes, this vent trim is the perfect complement to available windshield trim kits.

Fits '14-'25 Electra Glide®, Street Glide® (except '24-later FLHX), Ultra Limited and Tri Glide® models with batwing fairing.

*NOTE: This product is a Paint to Order accessory.
Please allow for an average of 5 weeks' delivery for this item.

COLOR-MATCHED ROAD GLIDE HEADLAMP TRIM
This sleek one-piece headlamp surround adds a clean custom look to the nose of the Road Glide® model. The easy-to-install Headlamp Trim hugs the dual headlamps and covers the matte black factory bezel for a menacing aerodynamic appearance. The swept back look and the knife-edge side strakes emphasize the streamlined shape of the fairing without impeding airflow to the vents or obstructing headlamp light patterns. Available in your choice of finish, the self-adhesive Headlamp Trim can be installed without removing the headlamp or fairing.

Fits '15-'25 Road Glide models (except '23-later FLTRXSE, '24-later FLTRX and FLTRXSTSE models).

ENGINE OIL FAQ

How does the new SYN3 differ from the previous SYN3, what makes this "new"?

The new formula is an innovative change that has been modernized and improved to allow the oil to operate with dual grade performance. The new SYN3 provides the viscosity stability of an SAE 50 for high temps and high load operation while performing like an SAE 15W-50 for cold weather starts and operation.

Does the new winter grade adversely affect hot climate performance?

No. The change in winter weight (from 20W to 15W,) will not harm your Harley-Davidson's performance in hot weather climates. The new fluid will perform well as an SAE-50, but also protect like a 15W-50 in colder weather. New SYN3 actually performs better in high-heat applications.

Can I use this in my older bike?

Yes! The new and improved SYN3 is fully backwards compatible for all Harley-Davidson's specifying SAE 20W-50 as an option.

What kind of testing has Harley-Davidson done on the new SYN3?

The new SYN3 has been rigorously tested for years. Thousands of dyno hours and miles at the Arizona Proving Grounds provide undeniable proof that the new SYN3 is the best oil for your Harley-Davidson. No other product has been tested to this level.

Do Harley-Davidson engines need synthetic lubricants?

Some Harley-Davidson powertrains are engineered to perform well on mineral-based or semi-synthetic lubricants but the truth is that synthetic oil, especially the new SYN3, is a marked upgrade providing additional long term protection of your investment.

Should I put a can of additive in with each oil change?

No, SYN3 is blended with an additive package already included. Other additives are not needed and may not be compatible with SYN3. In fact, oil additives may dilute the SYN3 formulation; therefore, we caution against using additives, as the wrong additive package may cause damage to your transmission or other components.

How much PAO is in the new formula?

The new oil has PAO but it has a proprietary blend of synthetics.

Who makes or blends this product?

SYN3 is a proprietary blend, exclusively custom-blended for Harley-Davidson.

D. FORMULA+ TRANSMISSION AND PRIMARY CHAINCASE LUBRICANT

C. HEAVY GEAR OIL

TESTED-CERTIFIED for use in Harley-Davidson® transmission and primary chaincase applications. Exclusively engineered for Harley-Davidson® motorcycles, this Heavy Gear Oil is intended for use in extreme temperature environments (desert heat or cold weather), frequent two-up riding and heavy load riding applications. This dual viscosity (SAE 80W-140), heavy weight gear and primary oil was developed with synthetic base stock and a small amount of mineral oil to aide in solubility of the proprietary additives. It flows better at cold start-up like an 80 weight oil and behaves like a 140 weight oil at high temperatures to provide maximum protection. Formulated to maintain the proper coefficient of friction for clutch operation and to provide superior lubrication for the primary chain drive. This Gear Oil was formulated to provide specialized lubricity for the anti-wear requirements of transmission gears across a wider temperature range than mineral based oil. This Heavy Gear Oil is approved by Harley-Davidson for use in all stages of transmission and primary chaincase life. This is not for use in the crankcase as a motor oil.

Formulated for use in all H-D® Transmissions and the following primary chaincase applications: '71-later XL, '83-'84 XR1000, '08-'13 XR, and '84-later Big Twin models with wet-type diaphragm spring clutch. Not for use in '02-'17 VRSC™ or '15-later XG models.

A. MOTORCYCLE TIRE PRESSURE MONITORING SYSTEM
Proper tire pressure is critical to the operation of your motorcycle. The Harley-Davidson® Tire Pressure Monitoring System (TPMS) takes the hassle out of monitoring your vehicle's front and rear tire pressure manually. The TPMS alerts the rider to low tire pressure as soon as the vehicle is started. While riding, receive low-pressure alerts via your H-D® Speedo/Tach or via the H-D™ Connect mobile app.

42300124A
Fits '20-later Touring models (except FLHXSE, FLTRXSE Japan models and Trike models) equipped with Original Equipment or Accessory wheels that accept a 90 degree TPMS sensor. Fits '21-later RA1250 and RA1250S models (except Japan) with Cast Wheels.

B. TIRE PRESSURE GAUGE AND FILL VALVE
Simplify checking the air pressure level and filling the tires on your motorcycle. This Tire Pressure Gauge features an 18 flexible hose and 2-way air chuck with both a 45° fill port and a unique side fill port that provides easy straight-in access to hard-to-reach motorcycle valve stems. The dual-range instant-read gauge measures pressures from 0-60 psi and 0-400 kPa, and is protected from impact and abrasion by a thick rubber collar. Designed to fit an air compressor with a standard 1/4 quick-disconnect coupler, this gauge allows you to check the pressure and fill the tire without removing the chuck from the tire. Just apply the chuck to the valve stem, read the pressure and add air by depressing the comfortable trigger lever. And for checking tire pressure on the road, you can use this tool like any standard tire gauge.

12700096A

C. COMPACT AIR COMPRESSOR WITH LIGHT
Correct tire pressure is crucial to safe operation and long tire life, but checking the pressure, finding a gas station with a working air pump and filling the tire is a chore that many of us ignore. The Compact Air Compressor is designed to simplify this necessary procedure. The compact, lightweight 12V pump is designed for life on the road. The all-in-one pump plugs into your bike's battery charging harness, and features a built-in 0-160 psi pressure gauge and bright LED work light. The 11 air hose and 6' fuse-protected power cord easily reach the front and rear wheels, and are stored in convenient compartments when not in use. The lightweight pump features durable, impact-resistant construction, and is small enough to fit easily in a saddlebag or strap-on luggage. Kit includes pump, valve stem extension and nylon carrying bag.

D. VALVE STEM EXTENSION
Sometimes there's just not enough space around the tire's valve stem for the gas station air chuck and hose to reach. Brake rotors, sprockets and saddlebags get in the way and keep the air chuck from making an airtight seal. When that happens, this Valve Stem Extension provides easy access. Simply screw the extension in place on the stem, fill the tire to the proper pressure, remove the extension and replace the valve stem cap. Then toss the extension in your saddlebag or tool roll for the next time.

42300009

E. COMPACT TIRE GAUGE AND TREAD DEPTH INDICATOR
Combination dial air pressure and tread depth gauge provides easy access to the valve stem. A durable internal diaphragm provides accurate air pressure readings with a dual range indicator for 0-60 psi and 0-400 kPa readings. The pressure relief valve is activated by a push button to eliminate inner gauge air pressure after use. The integrated tire tread depth gauge features a dual-range color-coded indicator, calibrated in 1/32 (0-14/32) and millimeters (0-11mm), for monitoring tread wear. A protective rubber boot covers the housing to protect the gauge from impact and abrasion.

75137-98B
Compact with braided stainless steel lead.

F. DIGITAL TIRE PRESSURE GAUGE
Back-lit Digital Tire Pressure Gauge is easy to read at any time of day. Providing accurate pressure readings in 0.50 psi increments up to 60 psi. Scale can be changed to read psi, bar, Kg or kPa pressure with the touch of a button. This versatile gauge features a 12 braided line and 90 degree angle chuck for easy access to valve stems, and a tough rubber jacket to protect the gauge from damage. Batteries are included.

75158-10

G. TIRE GAUGE AND TREAD DEPTH INDICATOR WITH EMBOSSED LEATHER POUCH
Chrome-plated steel gauge housing with Harley-Davidson script and 90 degree air chuck. Dual range indicator for air pressure and tire tread depth readings. Calibrated for 10-50 psi and 0-32/32 tread depth readings. Rotate the indicator shaft 90 degrees in the housing for 70-345 kPa and 0-30mm tread depth readings. Complete with a Bar & Shield logo embossed leather pouch.

ONE-YEAR OVER-THE-COUNTER PARTS AND ACCESSORIES WARRANTY

Harley-Davidson warrants that street legal Genuine Motor Parts ("Parts") and street legal Genuine Motor Accessories ("Accessories") that are purchased on or after January 1, 2012 through an authorized dealer will be free from factory defects, under normal use and service, for a period of one year starting from the date of retail sale and delivery (not date of installation).
Because this limited warranty covers only Parts and Accessories, labor is not covered. This limited parts warranty does not cover defects or damage due to abuse, misuse or improper installation. This parts warranty applies to Parts and Accessories you or an aftermarket shop have installed, but only for defects in manufacturing — not conditions caused by the improper installation.

This Parts and Accessories warranty is separate and distinct from the limited factory warranty that applies to your stock motorcycle. This Parts and Accessories warranty does not extend or modify the factory warranty that applies to your motorcycle. It only covers the street legal Genuine Motor Parts and street legal Genuine Motor Accessories added to your motorcycle.

This Parts and Accessories warranty does not cover defects, damage or premature wear to your motorcycle that are caused by the installation or use of Parts and Accessories, even those installed by an authorized dealership. Examples include, but are not limited to performance-enhancing powertrain components or software, exhaust systems, non-approved tires, lowering kits, handlebars, add-ons connected to the factory electrical system, etc.

The fact that Parts or Accessories are labeled or branded Harley-Davidson, or are sold or installed by an authorized dealership, does not necessarily make them appropriate or warranted for the make and model of your motorcycle. The use of Parts and Accessories not designed and tested for your motorcycle may have negative consequences on the performance of your motorcycle and may create conditions not covered by the limited factory warranty.

The remedy for breach of this limited Parts and Accessories warranty is expressly limited to the repair or replacement of any component that proves to be defective, and does not extend or create liability for consequential damages, costs or expenses, including loss of time, inconvenience, or loss of use of the motorcycle. Any implied warranty, including warranty of merchantability or fitness for a particular purpose, is expressly limited to the duration of this limited one-year Parts and Accessories warranty, or to the shortest duration permitted

EXCLUDED COMPONENTS:
All Genuine Motor Parts & Accessories will qualify for the one-year over-the-counter warranty, with the following exceptions:

- Tires
- Chemicals
- Premium Luggage (two years)
- Harley-Davidson Audio Powered by Rockford-Fosgate (two years)
- Non-street legal components (including Screamin' Eagle® Pro)
- Anything with a manufacturer/factory warranty
- Other disposable and consumable items

Please see Harley-Davidson.com/warranty for more information regarding warranties.

To obtain warranty service, return the affected component(s) with proof of purchase, at your expense, within the limited warranty period to an authorized Harley-Davidson® dealer.
